FOR IMMEDIATE RELEASE

## Metegridy announces the release of Pipeline Enterprise SaaS 1.7 for pipeline construction

**EDMONTON, Alberta.**

**November 15, 2017** Metegridy is proud to announce the release of Version 1.7 of Pipeline Enterprise, which is the company's groundbreaking Software as a Service (SaaS) product for construction on pipeline projects. A powerful mobile solution for data capture on the right of way, Pipeline Enterprise integrates data collection across all levels of the pipeline construction into a single object-oriented database.

This enables you to harness the database for true business intelligence, key performance indicators, charting, dynamic dashboards, and the complete birth certificate of the pipeline. The system captures everything from the field, start to finish, on all activities and on all projects. It includes data from all the field inspectors, welding, non-destructive testing results, survey as-built coordinates, labour, equipment, materials, unit price items, and more. The new update features key enhancements developed around user-driven feedback to provide greater time and cost savings to the pipeline/midstream sectors.

Pipeline Enterprise **solves industry pain points** associated with dated practices of maintaining paper records for project data. With its standardized, real-time data collection and reporting, PE provides immediate access to key information like site and weld imagery, progress reports, materials, production numbers, and inspection data. All project information from start to finish is collated into a single, robust database where it can be readily accessed at any time.

*"Everyone is looking to save time and money on necessary capital infrastructure projects in midstream,"* said Brad Raabis, Vice President, Pipeline Enterprise at Metegridy. *"This enables them to do so. With our system, customers experience higher efficiency, better regulatory compliance, and real-time knowledge of all facets of project operation. They no longer waste time and resources trying to mine the knowledge they need from a disordered array of files and spreadsheets. Pipeline Enterprise frees customers from limitations of distance, redundant data entry, Excel and PDF."*

New functionality in the Pipeline Enterprise platform with this release includes faster applications and **cross-border capability**, where inputted data can be easily deciphered between metric and US customary. *"Companies with cross-border projects can easily track progress with the ability to view information in their system of measurement. Input and reports are easily available in either,"* says Tennille Barber, Project Support, Metegridy. *"The ability to seamlessly track progress from the United States to Canada or Mexico — or vice versa — provides substantial time savings."*

### About Metegridy

Metegridy is a globally trusted provider of comprehensive inspection data management solutions, protecting over \$550 billion in assets across 850 facilities worldwide. Praised for unparalleled speed of deployment, our products are also highly configurable — allowing our experts to strategically tailor them to your business practices. With over 20 years in the industry, we proudly service top tier global organizations in the Oil & Gas, Pipeline, Chemical, and Power Generation industries.
